GEORGIA GENERAL OVERVIEW

Located at the crossroads of Europe, Central Asia, Middle East and Africa, Georgia is the shortest transit route between Western Europe and Central Asia for transportation of oil and gas as well as dry cargo

Area:	69,700 sq km
Population (2013E):	4.5 mln
Life expectancy:	76 years
Official language:	Georgian
Literacy:	99.7%
Capital:	Tbilisi
Currency (code):	Lari (GEL)
GDP 2013:	US\$ 16.1 bln
GDP real growth rate 2013:	+3.3%*
GDP per capita 2013 PPP:	US\$ 6,100
FDI Inflows 2013:	US\$ 941.9 mln
Inflation rate (e-o-p) 2013:	2.4%
Unemployment Rate 2013	14.6%
Total Export 2014	US\$ 2.861 bln
Average GEL/USD 2014	1.76
Average GEL/EUR 2014	2.34

* The World Bank expects Georgia to have 5.5% economic growth in 2014

Georgia Has the Fourth Lowest Tax Burden Globally

Over the last decade annual growth rate for international visitors is 33%

The Most Liberal Tax System and Trade Policy in the Region

- Very simple and service oriented customs policy
- Efficient tax administration
- No quantitative restrictions or tariff barriers
- Average Customs Clearance ~15 minutes
- 0% customs tax on over 80% of imports
- 0% customs tax on all exports
- 0% VAT on all exports

GEORGIAN EXPORT OVERVIEW

Since 2000, the export of goods and services in Georgia has increased about 10 times and reached \$2.91 billion and \$2.98 billion respectively in 2013. The export of services has also shown a positive trend since 2000, with an annual average growth rate of 18%. Herewith, over the last decade, Georgia has become a net exporter of services.

Over the past 14 years, the export of goods from Georgia has been growing at an annual average rate of 20%. However, due to various external factors in the region, there have been several downturns, followed by significant increases in the coming years.

In 2006, the slowdown was the result of the Russian embargo on Georgian products, which was followed by a 32% increase in 2007 due to the diversification of Georgian export markets. Another significant downturn appeared in 2009 after the Georgia-Russia War in 2008, which was followed by a 48% and 31% increase in 2010 and 2011 respectively.

In 2014, the Ukraine crisis and Russian ruble devaluation have slowed Georgian export. However, the newly signed DCFTA with the European Union is expected to foster the entrance of Georgian export-oriented companies into new markets and further diversify exports of goods and services.

The top three export countries account for almost 40% of Georgian export. The decrease of motor car (which make up 18% of Georgian export structure) exports to Azerbaijan was a result of changes in the country's import regulations regarding the vehicles. However, a major growth of industrial and value added agricultural products has further strengthened and enhanced positive tendencies observed over the years. Same trend applied to overall export to European Union.

The top export countries vary from year to year, which shows that Georgia has diversified its export markets. As such, the government of Georgia puts a lot of effort into supporting exporters expand their potential in new and existing markets.

Export of Goods and Services (\$mln' 1995-2014)

Georgia is home to over 2,000 mineral water springs and several brands (Nabeglavi, Sairme, Borjomi, Rachis Tsklebi, Sno etc.) are bottled for domestic consumption and export.

Georgian mineral waters have exceptional and interesting tastes - very different from the French and Italian varieties. The most famous Georgian mineral waters – Nabeglavi and Borjomi – are protected Geographic Indications, but there are many lesser-known springs worth sampling located in small towns and alongside roads throughout the country.

Georgia's mineral springs were discovered over one-thousand years ago and the use of Georgian mineral water has been recommended by Georgian and foreign researchers for the complex treatment of several digestive diseases, as well as diabetes mellitus. Traditionally, Georgians consume sparkling mineral waters as an extremely effective antioxidant during food poisoning and especially as a natural hangover remedy. Despite the loss of its largest market-Russia (Embargo 2006-2013) Georgia quickly recovered and diversified water exports to up to 40 countries, including eight countries where it remains to be the market leader. After the re-opening of the Russian market from 2014, exports spiked further.

The Mineral and Still water sector in Georgia had an approximate output of GEL 245 million* (25.4 million dekaliters) in 2013. Herewith, from January-September, 2014 water production has increased by 31% and reached 257.2 million GEL (25.2 million dekaliters) compared to the same period in 2013.

In 2014, the export of Georgian spring and mineral waters increased by 28% and reached \$137.1 million. The major export destinations are Russia (48%), Ukraine (21%) and Kazakhstan (9%).

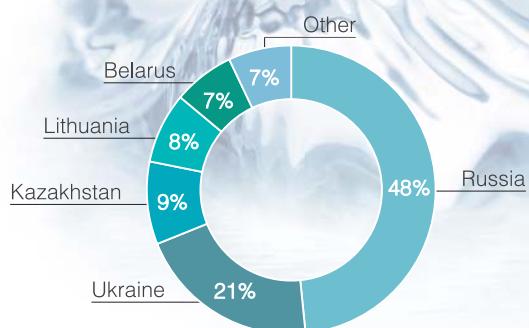

COMPETITIVE ADVANTAGES

- High Water quality
- Room for expansion (capacity of existing bottlers can more than double)
- National pride, part of the Georgian culture, tradition
- Certified curative properties
- Well protected from forgery
- Vast export experience
- High recognition in former Soviet countries and rising popularity in US, UAE, EU

Nowadays demand for tea is steadily increasing on the world market, as well as in tea-producing countries. Currently countries like India, China, Kenya and Sri Lanka are the leading producers of this product. Tea growing in Georgia first took place in the 1830s and it was the primary tea supplier for the former Soviet Union.

West Georgia's humid sub-tropical climate and mineral rich soils contribute to the original taste and high quality of Georgian tea, and this is where tea plantations are mainly found. Tea leaves are picked 4-5 times per season, (May – October). Georgian tea can compete on western markets with the likes of India or Sri-Lanka due to its fine quality and, in most cases, in savings on transportation. It is believed to have a unique taste, tender shoots and a special aroma, and is especially good for blending different types of tea leaves. Georgian green tea stands-out by its very interesting, strong taste. The main consumers of Georgian tea are Turkey, Germany, Mongolia, and Ukraine.

In 2013, tea production in Georgia had an approximate output of GEL 4.9 million* (1.9 million tons). Herewith, from the period of January-September, 2014, production of tea has increased by 400% (6.7 million ton) compared to the same period in 2013.

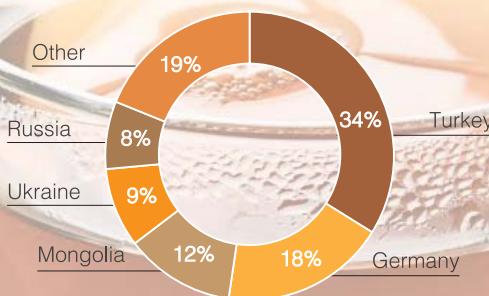

COMPETITIVE ADVANTAGES

- Rich tradition of tea production
- High-quality raw materials
- Advantageous price/quality correlation
- 0% entry tariff for Georgian tea in more than 50 countries
- High recognition in former soviet countires

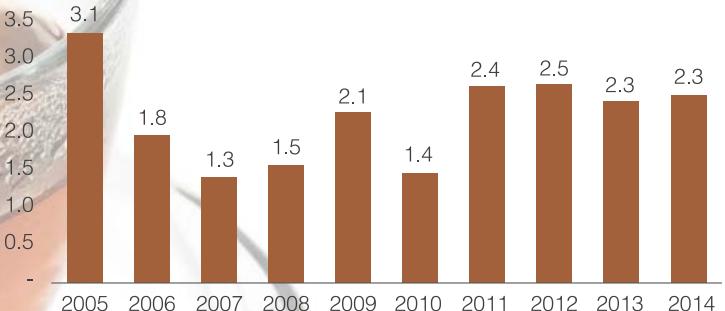

GEORGIA AS A TRADING PARTNER

Georgian Carbonated Soft Drinks

HS Code: 2202

Soft drinks are very popular in Georgia, and beverages are an important part of Georgian culture and history. With genuine Georgian water taste, soft drinks are prepared using classic recipes and modern technology. Georgian soft drinks, which offer an unforgettable taste and flavor, meet all modern standards.

Georgian carbonated soft drinks – or lemonades, are flavored with cream, grape, peach, pear, lemon and tarragon. Tarragon (woodruff) is traditionally dyed green. Tarragon lemonade was invented in the 19th century by Georgian pharmacist Mitrofan Lagidze, who started adding carbonated water to his tarragon syrup mixes. It went into mass production in the Soviet Union in 1981 and gained exceptional popularity among all republics.

Today, there is tremendous expansion potential in the industry in Georgia. There are one billion potential customers within range in the Caucasus, the Black Sea region, Central Asia, the Balkans and the EU, and Georgia has beneficial trade regimes with most of these countries.

The Mineral water sector in Georgia had an approximate output of GEL 197.6 million* (19.6 million dekaliters) in 2013. Herewith, from January-September, 2014 production has increased by 27% and reached 189.1 million GEL (18.7 million dekaliters), compared to the same period in 2013.

In 2014, the export of Georgian lemonades has increased by 65% and reached \$28.7 million. The major export destinations are Uzbekistan (35%), Kazakhstan (28%), and Russia (13%).

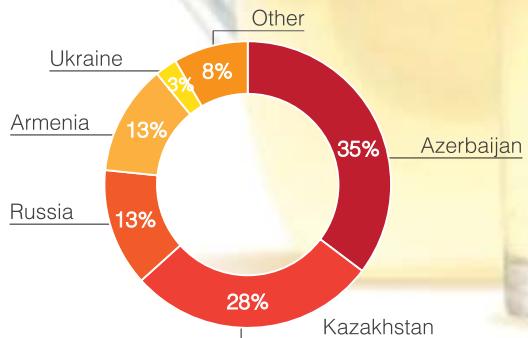

COMPETITIVE ADVANTAGES

- Long Tradition and Experience
- High quality water
- Extraordinary, original taste
- Flavor-rich fruit concentrates
- Advanced technological production processes
- Attractive packaging

Oranges, apples, grapes and bananas are the most popular fruits in the world, and the first three of these are grown in Georgia. A multitude of micro-climatic zones and a favorable natural environment have contributed to the commercialization of fruit production in Georgia since the early 1960s, and it has since become a significant export product to the rest of the Soviet Union. After the collapse of the Soviet Union, Georgian agriculture suffered a long recession, during which the majority of Georgian arable land was not cultivated and no chemical inputs were introduced. This made Georgian agriculture lands very attractive for bio-production in the decades after.

Shida Kartli region of Georgia is the most renowned for apple and pear orchards and the processing also takes place locally. All large-scale juice producers in Georgia are equipped with modern technology production lines and meet international standards, which are necessary for the export to developed countries.

The unique taste and the high-quality of Georgian juices is preconditioned by the local water, which is rich with minerals.

The export of Georgian Juice products in 2014 increased by 57% compared to 2013. The major export destination of Georgian juices is the European Union and USA, which represents more than 50% of the total export.

The Juice sector in Georgia had an approximate output of GEL 14 million** (5500 Tones) in 2013. Herewith, from January-September, 2014 production has decreased by 14% and reached 9 million GEL (3500 Tones) compared to the same period in 2013.

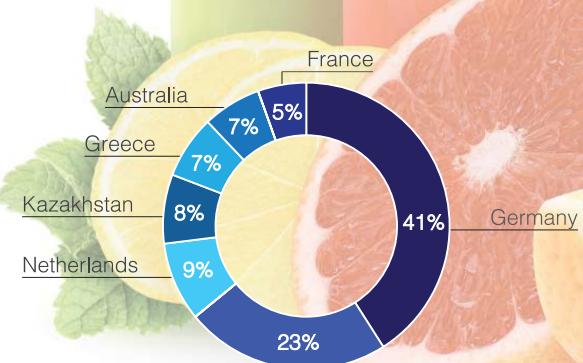

COMPETITIVE ADVANTAGES

- Diversity of fruit crops
- High-quality water-rich minerals
- Technologically well-equipped processing plants with high production capacity
- Locally produces concentrates
- Reasonable price/quality correlation

The taste and quality of Georgian water is the main distinguishing factor of Georgian beer as a premium product. Vast investments have been made throughout the last two decades (Zedazeni, Castel, Efes) in the sector and the main players in this segment include Zedazeni Ltd, Kazbegi JSC, Lomisi (Natakhtari Brewery) JSC and Castel - Georgia Ltd.

Beer production in Georgia had an approximate output of GEL 144.7 million* (11.1 million dekaliters) in 2013. Herewith, during the period of January-September, 2014, production of beer has increased by 10% compared to the same period in 2013.

In 2014, the export of Georgian Beer has decreased by 45%, the negative trend last two years is the result of the changes in the Azerbaijan's import regulations regarding the beverages.

The major export destinations are Azerbaijan (49%), Russia (16%) and Cyprus (12%).

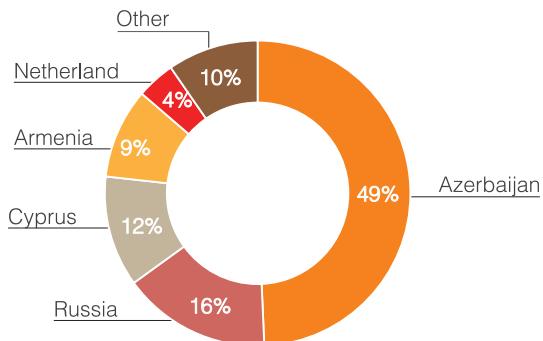

COMPETITIVE ADVANTAGES

- Unique Water Quality
- Advantageous price/quality correlation
- Advanced technological production process and attractive packaging
- Highly skilled labor
- Vast export experience
- 0% Entry tariff import from Georgia to more than 50 countries

Georgia, located at the crossroads of Europe and Asia, is a country of about five million, where wine is part the nation's cultural heritage rather than just an alcoholic beverage. Georgia has five distinct wine-producing regions: Kakheti, Kartli, Imereti, Racha-Lechkhumi and the Black Sea subtropical zone.

Kartli is the region where scientists have found and tested wine residues discovered on the inner surfaces of 8,000-year-old ceramic fermentation and storage jars, known as "Qvevri".

Georgian wine is produced using both traditional methods, as well as modern European techniques. These varied production styles contribute to a wide range of flavor profiles all produced from the same grape and appellation, resulting in a single variety having a greatly varied taste and quality.

There are about 180 wine companies functioning in the country, and 94 of these are engaged in export activities. The key industry players are export-oriented and their export activities reach 80-95% of total production. Russia was the largest importer of Georgian wines until its implementation of the 2006 embargo. Nevertheless, Georgia began to diversify its export markets and despite the war with Russia in 2008 and the world economic crisis, Georgia's wine exports grew to the pre-embargo numbers. After re-opening of the Russian market from 2014, export of wine spiked further.

At present, most of the companies are well equipped with up-to-date production facilities and there are advanced, accredited laboratories to maintain the necessary quality control.

The wine sector in Georgia had an approximate output of GEL 241.3 million** (5.1 million dekaliters) in 2013. Herewith, from January-September of 2014, production increased by 92% and reached 243.4 million GEL (45.1 million dekaliters) compared to the same period in 2013.

In 2014, the export of Georgian Wine increased by 41% and reached US \$182.6 million. The major export destinations were Russia (61%), Ukraine (11%) and Kazakhstan (9%).

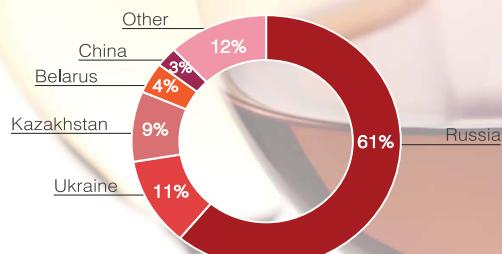

COMPETITIVE ADVANTAGES

- Unique grape varieties
- Longest tradition of wine making
- High-quality raw materials
- Advantageous price/quality correlation
- A stable and growing economy
- 0% entry tariff for Georgian wine in more than 50 countries

Georgian Brandy & Spirits

HS Code: 2208

Georgia is renowned for its high-quality wines made from unique grape varieties and its use of various traditional technologies for making brandy and other wine distillations. There are specific types of Georgian grapes that are ideal for the spirits used in production of brandy: Tsitska, Tsolikauri, Rqatsiteli, Mtsvane, and Chinuri. It has been shown that they are very similar to the French grapes that are used for the production of cognac and therefore produce a high-quality brandy.

The main market players in the Georgian brandy industry are few, but they are utilizing high-quality equipment and possess long-term experience and traditions. The companies have given their products the French classification of brandy VS, VSOP, XO, thus maintaining its quality standards to those of French Cognac.

The spirits in Georgia are distilled using modern equipment and multiple filtration systems. Strict quality and laboratory control is carried out at all production stages, both in blending-production and the bottling process. The companies are using raw material including wheat, bread, maize and oats.

Georgia has its own traditional technology of distillation of spirits from grape pomace (material left after the production of wine) called Chacha, which is similar to the Italian Grappa, Spanish Orujo, French Marc and the like. The production of this type of spirit is also practiced using figs, tangerines, and oranges. Chacha is renowned as being a homemade product that was made throughout the centuries in Georgia, and only recently have wine companies started factory production.

The Brandy and Spirits sector in Georgia had an approximate output of GEL 73.3 million (0.9 million dekaliters) in 2013. Herewith, during the period of January-September, 2014, production of brandy and spirits has increased by 158% compared to the same period in 2013.

In 2014, the export of Georgian Brandy and Spirits decreased by 5% and reached US \$95.2 million. The major export destinations are Ukraine (25%), Russia (18%) and the Netherlands (13%).

COMPETITIVE ADVANTAGES

- Unique grape varieties
- Longest tradition of making brandy and spirits
- Advanced technological production process and attractive packaging
- High-quality raw materials
- Advantageous price/quality correlation
- A stable and growing economy
- 0% import tariff in more than 50 countries

GEORGIA AS A TRADING PARTNER

Georgia is the second largest exporter of processed nuts, next to the world leader Turkey. Western part of the country has been traditional production area for nuts. Six types of naturally grown nuts are cultivated in Georgia on 1500-1800 meter altitude: 1. *Corylusavellana*; 2.*Coryluscolumna*; 3.*Corylus pointica*; 4.*Corylus imeretina*; 5.*Corylus colchica*; 6. *Coryluscachetica*. Due to a powerful root system of local varieties, very limited amount of fertilizers are applied and many producers even started conversion to Bio. Nuts diseases are very rare and pesticides are also used in very moderate amounts.

East and West Georgia is the most renowned for its hazelnut orchards, and processing also takes place locally with most of the producers possessing ISO/HACCP certificates.

The export of Georgian hazelnuts in 2014 demonstrated 10% growth compared to 2013 and 119% growth compared to 2012. Hazelnuts are the number one agriculture export product in Georgia, and currently about 80% of the share is exported to EU Market

The Hazelnut sector in Georgia had an approximate output of GEL 250 million* (27708 Tones) in 2013. Herewith, From January-September, 2014 production has increased by 37% and reached 167million GEL (11868 Tones)

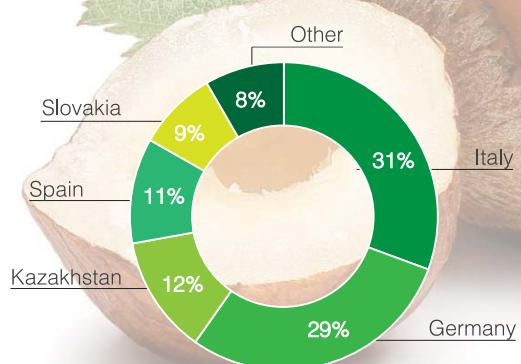

COMPETITIVE ADVANTAGES

- Long tradition and experience

Today Georgia is largely an agriculture-based economy. Traditionally, Georgia was a net exporter of food products and a major supplier of vegetables, fruit, tea, essential oils, citrus, wine, mineral waters, cognac, canned fruits, and vegetables to the rest of the Soviet Union.

After the collapse of the Soviet Union, the Georgian food processing sector suffered a long recession and the country lost its position on the export market. However, over the last decades, Georgia implemented significant economic reforms and completed the transition to a market system based on private ownership with the ultimate objective of integrating Georgian agricultural products and processing into the international food and beverage markets.

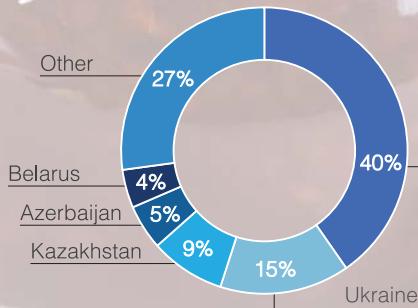

Georgian food processing can be divided into two main groups. The first group is represented by products that mainly consists of domestic resources and are oriented to export (wine, brandy, alcohol, tea and canned food, essential oils, tobacco products, bottled mineral water). The second group on the other hand, uses imported inputs/products and mainly supplies the domestic market (milk and dairy products, meat and ham, fish, sugar, oil, fat, pasta, beer and non-alcoholic drinks).

Since 2009, food export has grown at an average rate of about 30% and in 2014 the value reached \$501 million, up 24% compared to 2013. The main export markets for Georgian food are Russia (40%) Ukraine (15%) and Kazakhstan (9%).

COMPETITIVE ADVANTAGES

- High-quality raw materials
- Advantageous price/quality correlation
- A stable and growing economy
- Free trade agreements with EU, Turkey and CIS

Pharmaceutical Industry

HS Code: 3004

Since 1930th, Georgia has been a leader in production of bacteriophages used for treating various bacterial infections. Herewith, Caucasus Mountains is well known for its wide range of unique medical and herbal plants.

The local pharmaceutical manufacturing sector in Georgia consists of 70 producers, of which GMP and Aversi Rational represent almost a 90% share on the market. Aversi and GMP are also the largest companies in the import and distribution sector where they have a joint share of 48%.

Local manufacturing has been growing rapidly at an average rate of about 46% per year from 2005 to 2014. In 2013, the value of local production was GEL96.5 million* while being \$22.1 million in 2006. Herewith, over the January-September, 2014 the production of medicaments has increased by 28% compared to the same period in 2013.

Over the last decade the pharmaceutical industry in Georgia has experienced double digit export growth and has grown at an annual rate of 48% from 2005 to 2014. Georgia exports pharmaceuticals to about 40 countries and in 2014 export reached \$92.1 million, up 75% compared to 2013.

The top consumer of Georgian pharmaceutical products are Uzbekistan (47%), Azerbaijan (30%) and Armenia (5%).

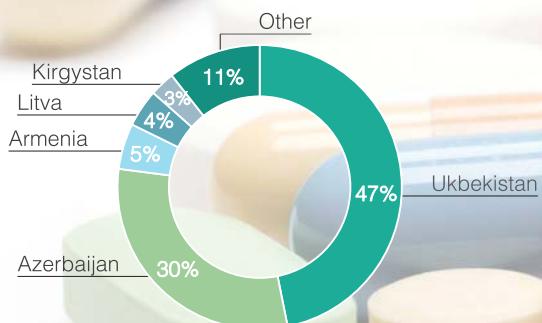

COMPETITIVE ADVANTAGES

- No Pharmaceutical pricing regulations
- No VAT on Pharmaceuticals
- Very low per capital pharmaceutical consumption (room for expansion)

GEORGIA AS A TRADING PARTNER

- **There is a 0% entry tariff** for Medicaments in - CIS countries, European Union, Turkey, Singapore, Hong Kong, Kiribati, Macao, Ukraine, USA, Bahrain, Kuwait, New Zealand, Qatar, Saudi Arabia, United Arab Emirates, Panama, Iceland, Haiti, Honduras and Albania
- **0%-5% entry tariff** for Medicaments in – Philippines and Yemen, Costa Rica
- **5%-10% entry tariff** for Medicaments in - Indonesia, Mongolia, Chile, Peru
- **10%-15% entry tariff** for Medicaments in - French Polynesia

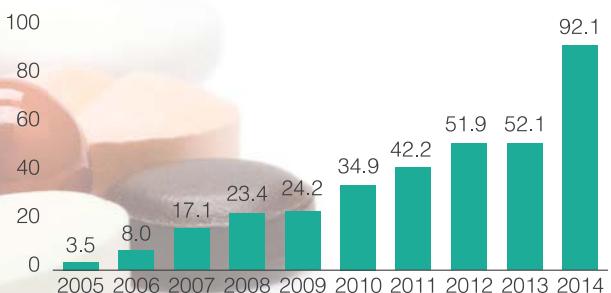

Export of Medicaments* by countries, 2014

**Medicaments put up in a measured doses

Organized apparel manufacturing in Georgia dates back to the beginning of the 20th century. During the Soviet era Georgia was well known for its high quality silk and wool blend fabrics. The industry collapsed after the dissolution of the Soviet Union in the early 1990s and re-emerged in 2004. Attracted by its skilled and low-cost labor, cheap land, low energy costs and preferential access to the EU market, several European brands outsourced their production to Georgia and some Turkish companies established plants in the Adjara region, at the border with Turkey.

Major brands such as Moncler, Tommy Hilfiger, Zara, Marks & Spencer, Koton, Puma, Mexx, Next, Etam, Lotto, Per Una, Autograph, Lebek, Hawes & Curtis, Roberto Cavalli now produce apparel in Georgia, thus promoting the "Made in Georgia" label.

The textile sector now consists of about 200 companies, 95% of which are micro-enterprises, while 5 of which are large Turkish companies and 12 Georgian manufacturers. The transition from the GSP+ to the DCFTA trade regime with the EU is expected to further stimulate the development of the industry.

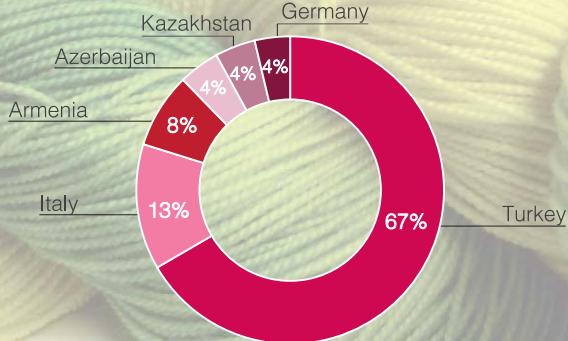

The export of Georgian Apparel and Shoes increased by 48% and reached \$93.8 million in 2014. The main export product in the apparel industry are T-shirts and other vests, knitted or crocheted (HS: 6109) with a 40% share of all export.

The main export markets for Georgian Apparel are Turkey (67%) Turkey, Italy (13%), Armenia (8%)

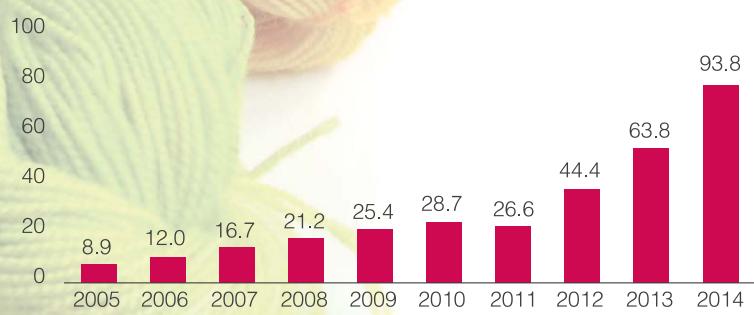

COMPETITIVE ADVANTAGES

- Availability of affordable and qualified workforce
- Proximity to markets and sourcing destinations with developed infrastructure and transportation systems
- Liberal business environment and preferential trade regimes with key regional markets
- Competitive utility costs
